

NASA JGO AO Description

Curt Niebur
EJSM Program Scientist
NASA Headquarters

EJSM Instrument Workshop
July 27-29, 2010

JGO Announcement of Opportunity

- NASA will issue an amendment to SALMON to solicit US contributions to JGO
 - Recent example is the Mars Trace Gas Orbiter opportunity
- The release date and content will be coordinated closely with ESA
 - Many of the JEO AO policies and requirements will apply
 - The evaluation process will be similar to JEO
- NASA is currently evaluating whether a one or two step process is necessary
 - JGO faces less stringent radiation and planetary protection requirements than JEO
 - Schedule analysis needed to determine if the ESA schedule can accommodate a two step process for US instruments
